

Machine Features

- 5HP TEFC motor rated for continuous use.

- Pneumatically operated drill with easy changing Jacobs chuck allows for use of most all style drill bits.

- 10" cutterhead uses replaceable carbide inserts to maintain sharp cutting edge for clean cuts.

- Simple start stop electrical controls.

Machine Features

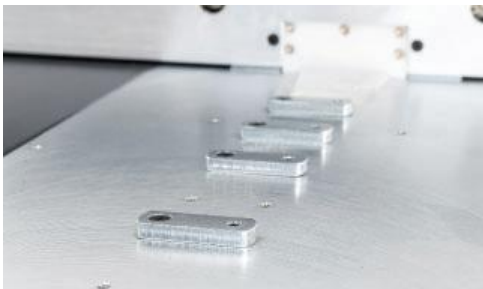

- Foot pedal operation.

- UHMW gate shuts automatically when cutterhead is not cycling.

- Fence is equipped with part placement switches. These switches restrict the operator from cycling machine without a part safely in place.

- Under mounted low profile stops allow operator to slide assembled drawer box from side to side without having to pick up the box.

Machine Features

- Pneumatic operations are individually speed controlled with flow regulators for customer specific speed settings.

- Single pneumatic connection through FLR. The Filter, Lubricator Regulator controls the pressure, cleans and lubricates air, providing reliable operation of pneumatics.

- (2) 4" dust ports require 436CFM at points of extraction for recommended dust control.

- Arbor lock restricts the arbor from turning while removing/installing the cutterhead.

Machine Features

- Secondary oiler for more control of fast moving pneumatics.
-

- Double action cylinders place drill in Left or Right position prior to cycle.
-

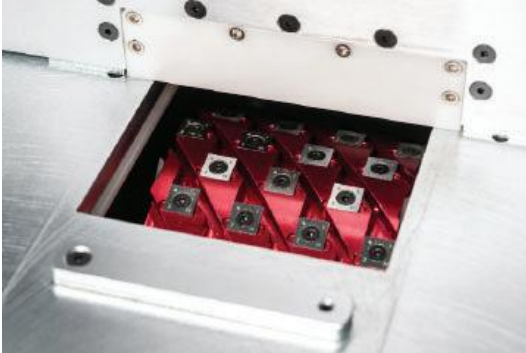

- 5" Cylinder cycles cutterhead effortlessly.
-

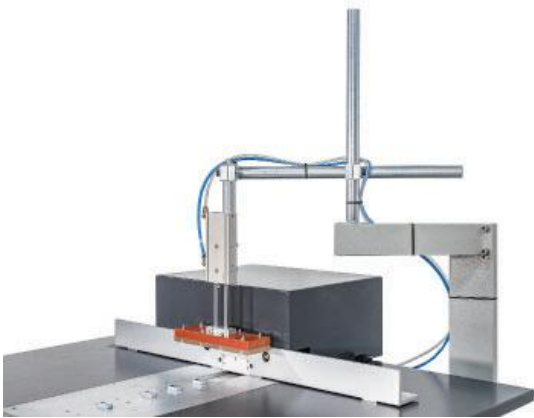

- Heavy duty top cover prevents operator from having to fully remove guarding during maintenance operations.

Machine Options

- (Optional) Up to 125mm (5") cutterhead.

- **Pneumatic Clamping System**
(Optional) Hold down secures part in place before cycle reducing operator fatigue.

- (Optional) Single part fence allows operators to run an unassembled drawer back. Ideal for point of use and just in time operations as well as for flat packaging.
